

PROMPT NEXT — WEBSITE IMPLEMENTATION & RESPONSIVE OPTIMIZATION REPORT

Document Type: Technical Handoff & Implementation Report

Project: Prompt Next Corporate Website

Author: Ayush Mishra

Date: September 24, 2026

Status: Completed & Verified

1. Executive Summary

This report documents the end-to-end technical implementation, responsive layout optimization, accessibility audit, sticky glassmorphic navigation, and resolution of critical blockers for the **Prompt Next** corporate web platform.

The primary goal of this phase was to align the website pixel-perfectly with Figma design specifications, establish uniform typography using the Satoshi font system, resolve responsive layout bugs across laptop, tablet, and mobile breakpoints, implement sticky blurred navigation, and ensure full WCAG 2.1 AA accessibility compliance for screen readers and keyboard navigation.

2. Completed Scope & Technical Accomplishments

2.1 Sticky Glassmorphic Header Navigation

1. **Dynamic Scroll Detection:**
 - `interaction.js` listens to `window.scrollY > 90` to toggle `.is-stuck` state on `.site-header` and `.wwd-header`.
2. **Glassmorphic Backdrop Blur:**
 - Configured `position: fixed !important; top: 0 !important; z-index: 1000 !important; background: rgba(8, 9, 11, 0.75) !important; -webkit-backdrop-filter: blur(16px) saturate(150%) !important; backdrop-filter: blur(16px) saturate(150%) !important; border-bottom: 1px solid var(--line) !important;` in `header.css` with a smooth `0.3s` transition.
3. **High Specificity Shielding:**
 - Scoped with `body .site-header.is-stuck, body .wwd-header.is-stuck (0, 2, 1)` to override page-specific header styles across all 15 templates.

2.2 Font System Migration & Prominent Hero Typography Calibration

1. **Satoshi Font Migration:**
 - Standardized Fontshare's Satoshi font family (`var(--font-sans)`) across all 15 page templates and CSS variables (`variables.css`).
2. **Figma Pixel-Perfect Typography Specs:**
 - **Large Screen Baseline** ($\geq 1200\text{px}$ / 1440px / 4K):
 - Hero Title (`h1`): `70px` font size, `88px` line height, `700` (Bold), `#FFFFFF`.
 - Hero Description (`p`): `20px` font size, `32px` line height, `400` (Regular), `#B0B0B0`.

- Section Title (**h2**): **48px** font size, **88px** line height, **700** (Bold), **#FFFFFF**.
- Body Copy (**p**): **24px** font size, **32px** line height, **400** (Regular), **#B0B0B0**.
- Prominent Responsive Hero Scaling:
 - Laptop (1024px – 1199px): **clamp(48px, 5vw, 58px)** | **line-height: 1.15**
 - Tablet (768px – 1023px): **clamp(40px, 5.5vw, 50px)** | **line-height: 1.15** (Bold, prominent tablet title)
 - Mobile ($\leq 600\text{px}$ / $\leq 425\text{px}$): **clamp(34px, 8vw, 42px)** | **line-height: 1.15** (Bold, impactful mobile title)
- 3. Landing Page Hero Mismatch Resolution:
 - Overrode legacy **#mobile-view { font-size: 60px; }** ID rule in **landing.css** with **font-size: inherit !important; line-height: inherit !important; display: block;**, allowing **From Intent To Outcome** to scale together as a unified hero title.

2.3 What-We-Do Capability Section (Mobile & Tablet Engineering)

1. Strict Content Sequence ($\leq 1050\text{px}$):
 - Applied CSS **display: contents;** to **.wwd-capability-copy** to elevate **h2**, **img**, **.wwd-lead**, and **ul** into direct flex siblings, enforcing:
 1. Title (**h2**) — **order: 1**
 2. Image (**.wwd-capability-image**) — **order: 2** (rounded **16px**, centered, max-height **420px**)
 3. Description (**.wwd-lead**) — **order: 3**
 4. Deliverables List (**ul**) — **order: 4**
2. 100% Width Container Coverage:
 - Eliminated the **440px** text width bottleneck on tablet viewports. Text and images span **100%** container width with clean document justification.

2.4 WCAG 2.1 AA Accessibility & Keyboard Navigation

1. Keyboard Focus Rings (WCAG Criteria 2.4.7):
 - Added explicit focus rings (**:focus-visible { outline: 2px solid #3b82f6 !important; outline-offset: 3px !important; }**) across all interactive elements in **reset.css**.
2. Skip to Content Link (WCAG Criteria 2.4.1):
 - Added accessible **Skip to main content** bypass links in all 15 HTML templates.
3. Keyboard & Touch Mobile Drawer Control (WCAG Criteria 2.1.1):
 - Configured document-level event delegation (**e.target.closest('.menu-button')**) in **interaction.js** and added an **Escape** key event listener to close active drawer menus and return focus to the toggle button.
4. Screen Reader Helper Utility (**.sr-only**):
 - Added standard visually hidden utility class for accessibility helper text.

2.5 Integrated Tooling & AWS Amplify Cloud Infrastructure

1. Node.js Package Manifest (**package.json**):
 - Integrated **package.json** project configuration and NPM scripts (**dev**, **start**) powered by **serve** (**npx -y serve . -p 3000**).
 - Configured runtime dependencies including **aws-amplify** (v6.22.0) alongside **@aws-amplify/backend**, **@aws-amplify/backend-cli**, **aws-cdk-lib**, **constructs**, **esbuild**, **tsx**, and **typescript**.
 2. AWS Amplify Backend Infrastructure (**amplify/**):
 - **amplify/backend.ts**: Main orchestration module for Amplify cloud backend stacks.
 - **amplify/auth/resource.ts**: User authentication definition.
 - **amplify/data/resource.ts**: Database & API data resource schema definition.
-

3. Technical Blockers & Logical Problem-Solving

- BLOCKER 1: Sticky Header Styling Overridden on Inner Pages ■
 - Root Cause: Page-specific CSS files defined `.page-name .wwd-header` with absolute ■
 - positioning and transparent backgrounds `(0, 2, 0)`. ■
 - ■
 - Logical Solution: Escalated sticky state in `header.css` to `body .site-header.is-stuck`, ■
 - `body .wwd-header.is-stuck (0, 2, 1)` with `!important backdrop blur (blur(16px) ■`
 - `saturate(150%))`. ■
 - BLOCKER 2: Hero Title Mismatch on Landing Page Mobile ■
 - Root Cause: `landing.css` contained an old ID selector `#mobile-view { font-size: 60px; } ■`
 - `(1, 0, 0)` that forced "To Outcome" to stay 60px while "From Intent" scaled to 24px. ■
 - ■
 - Logical Solution: Updated `#mobile-view` in `landing.css` to `font-size: inherit !important; ■`
 - `line-height: inherit !important; display: block;.` ■
 - BLOCKER 3: Incorrect Element Order on What-We-Do Tablet View ■
 - Root Cause: Reversed layout rows (`wwd-reverse`) placed images before text, while normal ■
 - rows placed images after all copy. ■
 - ■
 - Logical Solution: Used `display: contents;` on `.wwd-capability-copy` and explicit order ■
 - properties (1: Title, 2: Image, 3: Description, 4: Bullets) at `≤1050px`. ■
 - BLOCKER 4: Hamburger Menu Icon Shifted Left on Homepage ■
 - Root Cause: On `index.html`, when `.nav-links` was hidden on mobile, `.nav-wrap` had no ■
 - `justify-content: space-between`, causing the button to sit next to the logo. ■
 - ■
 - Logical Solution: Added `margin-left: auto !important; z-index: 100 !important;` to ■
 - `.menu-button` and `justify-content: space-between !important;` to `.nav-wrap` in ■
 - `mobile-nav.css`. ■
-

4. Breakpoint Alignment Architecture

| Breakpoint Tier | Viewport Width | Key Layout Behaviors |

| :--- | :--- | :--- |

| **4K / Extra Large** | **≥1440px** | Centered max-width container (**1280px / 1440px**), full 70px/88px typography, crisp SVG graphics. |

| **Laptop / Desktop** | **1024px – 1439px** | Hero title: **clamp(48px, 5vw, 58px)**; nav link gap: **18px**, grid gaps tightened. |

| **Tablet** | **768px – 1023px** | Hero title: **clamp(40px, 5.5vw, 50px)**; hamburger menu activates at **960px**; What-We-Do order: Title -> Image -> Description. |

| **Mobile / Phablet** | **≤600px / ≤425px** | Hero title: **clamp(34px, 8vw, 42px)** line-height: **1.15**; all grids collapse to 1-column flex/grid; mobile header height: **64px**. |

5. Verification & Compliance Matrix

- [x] **HTML5 Validity**: All 15 HTML documents parsed with valid doctype, meta tags, and semantic landmark elements.
 - [x] **Sticky Blur Header**: **backdrop-filter: blur(16px)** active on scroll across all pages.
 - [x] **Font Consistency**: Satoshi font active across all 15 templates and CSS variables.
 - [x] **Responsive Verification**: Verified across 375px (Mobile), 768px (Tablet), 1024px (Laptop), 1440px (Desktop), and 4K viewports.
 - [x] **WCAG 2.1 AA Accessibility**: High-contrast focus rings active on Tab key, **.sr-only** class present, skip-to-content links operational, **Escape** key closes mobile drawer.
 - [x] **Zero Broken Routes**: All internal links, CTAs, and extensionless routes return HTTP 200 OK.
-

6. Conclusion & Handoff Sign-Off

The **Prompt Next** website codebase is fully optimized, WCAG 2.1 AA accessible, responsive across all target breakpoints, and ready for production deployment.
